

Gabriel Cardoso Silva Couto

Software Engineer | Backend · Automation · Systems Integration

Belo Horizonte, Minas Gerais, Brazil | (37) 99834-7621 | gabrielsilva.couto@outlook.com | [linkedin.com/in/gabriel-cardoso-77ab222b9](https://www.linkedin.com/in/gabriel-cardoso-77ab222b9)

Professional Summary

Software Engineer with more than 4 years of experience in corporate environments, specializing in backend development, process automation (RPA), and ERP integration with SAP Business One. Proven track record in optimizing high-volume SQL databases (HANA), building scalable REST APIs, and translating complex business rules into automated solutions using Python, Java, and Spring Boot. Currently deepening expertise in distributed systems architecture, AWS, and data engineering.

Education

Software Engineering

Centro Universitário de Belo Horizonte (UniBH)

Expected graduation: June 2027

Professional Experience

Systems Analyst / SAP Business One

Scientific Dental — August 2024 to Present

- Designed and deployed a commission calculation engine (Financial Intelligence & Commission Engine) using advanced SQL views on SAP HANA, consolidating multi-variable financial rules and automating commission calculations for the entire sales team, eliminating manual errors and ensuring audit accuracy.
- Developed a fiscal automation service (Fiscal RPA Service) in Python to automate batch download and parsing of electronic service invoices (NFSe) from public municipal portals, reducing the tax team's operational time by more than 80%.
- Modeled and optimized HANA SQL queries for strategic reports and management dashboards, reducing overall operational time by more than 20%.
- Integrated and automated workflows between internal systems and SAP Business One, improving data reliability and reducing manual rework.

Systems Assistant

Scientific Dental — January 2024 to July 2024

- Provided technical support and maintained corporate infrastructure.
- Supported SAP Business One setup and parameterization.
- Developed Python and SQL scripts to optimize administrative routines.
- Participated actively in internal process automation initiatives.

Administrative Assistant

Curem — June 2023 to November 2023

- Developed Python scripts to automate repetitive tasks, generating consistent productivity gains.
- Optimized the purchasing workflow, reducing average delivery time by 15%.
- Organized and analyzed operational data to support decision-making.

IT Support Apprentice

Centro Universitário UNA — September 2021 to May 2023

- Delivered first-level technical support for hardware, software, and network issues.
- Installed, configured, and maintained corporate systems.
- Managed inventory control and supported IT infrastructure operations.

Selected Technical Projects

Financial Intelligence & Commission Engine

Stack: SAP HANA SQL, SAP Business One

Corporate commission calculation engine built on an architecture of interdependent SQL views. Unified scattered business rules and complex financial calculations into an optimized database structure, ensuring audit accuracy and full visibility for commercial management.

Fiscal RPA Service — NFSe Automation

Stack: Python, Playwright, Data Parsing

Microservice developed to automate the complete flow of extraction, parsing, and organization of electronic service invoices by accounting period from public municipal portals. Significantly reduced recurring manual work for the finance team.

Automated Business Intelligence Pipeline (PoC)

Stack: Python, HANA SQL, Streamlit

Proof of concept for an automated BI pipeline integrated with SAP B1, capable of generating dynamic reports and real-time strategic analysis from large corporate datasets. Demonstrated

end-to-end data ingestion, transformation, and visualization architecture.

Chrome Extension — YouTube Reminder

Stack: Node.js, React, JavaScript, YouTube API

Browser extension integrated with the YouTube API for storing links with timestamps, structured with a modular component-based architecture.

Investment Application (in development)

Stack: Java, Spring Boot, SQL

Backend application with investor profile analysis logic, automated financial simulations, and portfolio recommendation algorithms. Developed with a focus on Clean Architecture and scalable REST APIs.

Technical Skills

Languages: Java, Python, SQL, JavaScript

Backend and Architecture: Spring Boot, Micronaut, REST APIs, Clean Architecture, OOP

Databases: SAP HANA, MySQL, PostgreSQL, Relational Modeling

Cloud and Tools: AWS Lambda, Git, Postman, SAP Business One

Data and Automation: Corporate data analysis, Strategic reporting, RPA, SQL optimization, ETL pipelines

Languages

Portuguese — Native

English — Fluent

Availability

Available for full-time opportunities. Interested in backend engineering, software engineering, and data engineering roles. Open to hybrid or remote work models.
