

GABRIEL CARDOSO SILVA COUTO

Software Developer | Backend | Full Stack | Data & Automation

Belo Horizonte, MG, Brazil | Open to remote, on-site and hybrid opportunities
+55 (37) 99834-7621 | gabrielsilva.couto@outlook.com | linkedin.com/in/gabriel-cardoso-engineer

PROFESSIONAL SUMMARY

Technology professional working in the field since 2021, with hands-on experience in software development, automation, data and corporate systems. Currently a Systems Analyst after a fast promotion from an IT Systems Assistant role, building Python automations, SAP HANA SQL solutions, integrations and backend services for finance, tax and commercial teams. Also works with C#/.NET and Java/Spring Boot, relational databases, Clean Architecture and REST APIs. Completing a B.Sc. in Software Engineering in 2027 and targeting junior-to-mid backend, full-stack or data engineering roles.

TECHNICAL SKILLS

Languages: C#, Java, Python, SQL, JavaScript

Backend & Web: .NET, Entity Framework Core, Spring Boot, Micronaut, REST APIs, Blazor, Angular, React

Databases: SAP HANA, SQL Server, PostgreSQL, MySQL, relational modeling, SQL views, query optimization

Data & Automation: ETL, data pipelines, RPA, Playwright, Selenium, web scraping, data parsing, Streamlit

Cloud & Tools: AWS Lambda, S3, CloudFront, Git, GitHub, Postman, Linux, SAP Business One

Engineering Practices: Clean Architecture, OOP, SOLID, technical documentation, requirements gathering, root-cause analysis, Git workflows

PROFESSIONAL EXPERIENCE

Systems Analyst — Backend Development, Data & Automation

Scientific Dental | Belo Horizonte, MG, Brazil | Aug 2024 – Present

- Build and deploy Python automations and bots that remove repetitive back-office work and improve efficiency across finance and operations.
- Design and optimize complex SAP HANA SQL queries and views for SAP Business One, supporting daily financial, tax and commercial analysis.
- Develop backend logic, integrations and data pipelines connecting the ERP with internal tools, with focus on data integrity, error handling, traceability and maintainability.
- Own solutions end to end: gather requirements, model the data, build, document, deploy and support them in production.

IT Systems & Development Assistant

Scientific Dental | Belo Horizonte, MG, Brazil | Jan 2024 – Jul 2024

- Investigated, reproduced and documented defects in internal systems and business processes, following incidents through resolution.
- Validated data integrity and application behavior using SQL queries against corporate databases.
- Mapped repetitive manual workflows and identified automation opportunities that directly contributed to my progression into the current backend and automation role.

Administrative Assistant — Process Automation

Curem | Jun 2023 – Nov 2023

- Built Python scripts and automations to reduce repetitive administrative work, standardize routines and minimize operational rework.
- Redesigned the purchasing and request-tracking workflow, contributing to a 15% reduction in average delivery time.
- Structured and analyzed operational data to improve visibility into purchasing activities and support management decisions.

Programming & Technology Apprentice

Centro Universitário UNA | Sep 2021 – May 2023

- Gained my first hands-on software development experience, applying programming logic and database fundamentals to real institutional needs.
- Supported the development, maintenance and improvement of internal websites and software, contributing fixes, tests and feature enhancements alongside the technical team.
- Worked with data and databases through querying, organization and application-support activities, strengthening core development and systems-integration fundamentals.

SELECTED PROJECTS

Financial Intelligence & Commission Engine — SAP Business One (production)

SAP HANA SQL | SAP Business One

Corporate commission-calculation engine built on interdependent SQL views. Centralized business rules and financial calculations that had previously been distributed across spreadsheets, improving auditability and commercial-management visibility.

Fiscal RPA Service — NFS-e Automation (production)

Python | Playwright / Selenium | Data parsing

Automation service that accesses municipal tax portals, extracts electronic service invoices by accounting period and structures the data for the finance team, replacing steps in a recurring manual workflow.

Automated Business Intelligence Pipeline (proof of concept)

Python | SAP HANA SQL | Streamlit

End-to-end BI pipeline over SAP Business One data, covering ingestion, transformation and visualization of corporate datasets in dynamic operational reports.

Investment Platform API (in development)

Java | Spring Boot | SQL | Clean Architecture

REST API for investor-profile analysis, automated financial simulations and portfolio recommendations, structured around clear separation of responsibilities and Clean Architecture principles.

FilmJournal — Full-Stack Movie Platform

Next.js | React | TypeScript | Fastify | Prisma | PostgreSQL

Full-stack app for logging and rating movies, analyzing viewing taste and uncovering gaps in film history. Next.js/React frontend with a Fastify API, JWT auth, Prisma/PostgreSQL and TMDB integration. GitHub: github.com/gabrielcoutho07/FilmJournal | Live: film-journal.vercel.app

EDUCATION

B.Sc. in Software Engineering — Centro Universitário de Belo Horizonte (UniBH) | Expected graduation: Jun 2027

LANGUAGES & AVAILABILITY

Portuguese: native | English: fluent, professional working proficiency

Based in Belo Horizonte, Brazil. Open to remote roles in Brazil and internationally, on-site or hybrid opportunities in Belo Horizonte, and relocation opportunities.
