

Gabriel Cardoso Silva Couto

Software Engineer | Backend | Automation | Systems Integration

Belo Horizonte, Minas Gerais, Brazil | (37) 99834-7621 | gabrielsilva.couto@outlook.com | [linkedin.com/in/gabriel-cardoso-77ab222b9](https://www.linkedin.com/in/gabriel-cardoso-77ab222b9)

PROFESSIONAL SUMMARY

Software Engineer with more than 4 years of experience in corporate environments, focused on backend development, process automation (RPA), SAP Business One integration, and SAP HANA database optimization. Experienced in building solutions with Python, Java, Spring Boot, REST APIs, SQL, and data pipelines. Currently expanding expertise in distributed systems, AWS, and data engineering.

TECHNICAL SKILLS

Languages: Java, Python, SQL, JavaScript

Backend and Architecture: Spring Boot, Micronaut, REST APIs, Clean Architecture, OOP

Databases: SAP HANA, MySQL, PostgreSQL, relational modeling, SQL optimization

Cloud and Tools: AWS Lambda, Git, Postman, SAP Business One

Data and Automation: RPA, ETL, data pipelines, strategic reporting, corporate data analysis

PROFESSIONAL EXPERIENCE

Systems Analyst | Backend Developer

Scientific Dental | Aug 2024 - Present

- Develop and deploy Python scripts and automation bots to eliminate manual activities and streamline internal workflows.
- Create and optimize complex SAP HANA SQL queries for SAP Business One, supporting real-time financial and operational analysis.
- Build backend logic and data pipelines focused on integrity, scalability, and enterprise systems integration.
- Reduce operational bottlenecks through task automation and database query performance improvements.

IT Systems and Development Assistant

Scientific Dental | Jan 2024 - Jul 2024

- Investigated, documented, and tracked software defects across internal tools and corporate processes.
- Validated data integrity and system behavior through SQL queries in enterprise databases.
- Identified repetitive manual processes and proposed opportunities for software automation.
- Provided technical support and incident resolution to minimize operational downtime.

Administrative Assistant

Curem | Jun 2023 - Nov 2023

- Developed Python scripts to automate repetitive tasks and improve productivity.
- Optimized the purchasing workflow, reducing average delivery time by 15%.
- Organized and analyzed operational data to support decision-making.

IT Apprentice | Development and Automation

Centro Universitário UNA | Sep 2021 - May 2023

- Applied programming logic to identify bottlenecks and propose more efficient support workflows.
- Troubleshoot academic systems and developed analytical skills for defect tracking and root-cause analysis.
- Managed service requests and maintained computer labs, strengthening knowledge of infrastructure, networks, and backend application interactions.
- Combined operational responsibilities with continued study in programming, databases, and systems architecture.

SELECTED TECHNICAL PROJECTS

Financial Intelligence and Commission Engine - SAP B1

Stack: SAP HANA SQL, SAP Business One

Corporate commission calculation engine based on interdependent SQL views. Centralized business rules and financial calculations in an optimized structure, improving auditability and visibility for commercial management.

Fiscal RPA Service - NFSe Automation

Stack: Python, Playwright/Selenium, data parsing

Microservice that automates the extraction, processing, and organization of electronic service invoices by accounting period from municipal portals, reducing recurring manual work for the finance team.

Automated Business Intelligence Pipeline (PoC)

Stack: Python, SAP HANA SQL, Streamlit

Proof of concept for a BI pipeline integrated with SAP Business One, covering ingestion, transformation, and visualization of large corporate datasets through dynamic reports.

Chrome Extension - YouTube Reminder

Stack: Node.js, React, JavaScript, YouTube API

Browser extension for saving YouTube links with timestamps, built with a modular component-based architecture.

Investment Application (in development)

Stack: Java, Spring Boot, SQL

Backend application with investor profile analysis, automated financial simulations, and portfolio recommendation algorithms, designed with Clean Architecture and REST APIs.

EDUCATION

Software Engineering - Centro Universitário de Belo Horizonte (UniBH) | Expected graduation: Jun 2027

LANGUAGES

Portuguese: Native | English: Fluent

AVAILABILITY

Available for full-time backend engineering, software engineering, or data engineering roles. Open to hybrid or remote work arrangements.
